

Eure Inc

COVID-19 Enhanced Safety and Sanitation Policy (4/22/20 updated)

Portable Restroom Operations (P.R.O. Division)

EURE, Inc. 1313 Priority Lane, Chesapeake, VA 23324

757.494.8770

To help limit the spread of COVID-19 also known as the Coronavirus, Eure Inc has taken the following steps/procedures:

- March 3rd: We held a company-wide meeting, informing all employees of new COVID-19 protocols and procedures.
- March 5th: We completed a company wide deep cleaning and sanitizing all Eure Inc properties and locations.
- March 15th We implemented “extreme” measures concerning social distancing and limiting access to company offices and facilities.
- We reduced office hours to limit opportunities for exposure.
- All pump trucks and flatbeds are sprayed daily with disinfectant
- Common areas and offices are sprayed and disinfected daily
- We increased field operations and hours to allow for more time to sanitize and disinfect equipment.
- Some office personnel are working remotely/virtually.
- Face Masks are required for any job task that requires an employee to be within six feet of another person.
- First hour of every morning is dedicated to cleaning and sanitizing of work spaces and high contact areas.
- “No contact” delivery and pickup services for all divisions.
Signs/Sanitation/Traffic
- All PRO division drivers are required to wear enhanced PPE to include: masks, eye protection, & gloves to be removed after each job to avoid cross contamination. All PRO Division drivers are also required to wear Tyvex full body suits as well. Each driver has their own personal hand sanitizer.
- We were proactive in securing a stable supply chain for toilet paper and sanitizing disinfectant spray chemicals.
- PRO division drivers use CDC recommended Disinfectant spray on each toilet on scheduled day of service.

Enhanced cleaning and sanitizing of portable restrooms. In addition to the normal cleaning procedures we now spray the outside of the unit with a powerful viricide that kills 99.9% of Flu, Corona, HIV, Etc. Once the outside of the unit is sanitized then the inside is sprayed and disinfected before the normal procedures begin.
